## DETAILED ACTION

### ***Allowable Subject Matter***

Claims 1-25 are allowed.

The following is an examiner's statement of reasons for allowance: The present invention is directed to a method and system for securely transmitting messages from a transmitter to a receiver. Each independent claim identifies the uniquely distinct features of "the transmitter derives transmission checking information from the signed message according to a specified law and associates with the signed message the derived checking information (IDEM) and the transmitter generates and transmits to the receiver data that represent the signed message and the transmission checking information (IDEM), and the receiver: receives said transmitted data, performs a signature comparison of the signature received in said transmitted data and a signature locally determined, in addition to said signature comparison, determines, according to said law, reception checking information (IDEM') deriving from the message received, and compares reception checking information (IDEM') against the transmission checking information (IDEM) in order to validate the message received in the event that they coincide". The closest prior art, Barton US 6,163,842), discloses a conventional system for securely transmitting messages fails to anticipate or render the above underlined limitations obvious.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
